

**Goal:** Familiarizing the student with using Github.

**Explanation:**

Follow the steps below:

1. Create a username on Github. If possible, your username should include your first and last name. If you have difficulty getting a username this way, you can create a unique username by adding random numbers to the end of the username you choose.
2. Follow the ECON484 course repo on Github.
3. Learn how to create a repo by following Github's Github 101 Tutorial.
4. Create a repo for your assignments in this course on Github. The name of this repo can be something like ECON484-HWs. Make sure that the repo is visible from the outside (public).
5. You can report the repo to the instructor teaching the course.

Notes:

1. Since the Github repo you will create as a result of this assignment will be used to submit other assignments, failure to complete this assignment will mean that your other assignments cannot be submitted. Therefore, it is important to complete this assignment.
2. If you have used Github in other courses before and therefore have a user, you only need to follow steps 2, 4 and 5.
